

Hi UBS team,

I am excited to apply for the 2026 Graduate Talent Program because I genuinely thrive in fast-paced, collaborative environments where technology meets real-world impact. As a full stack developer and AI engineer, I have built production-ready applications including a voice synthesis platform and a blockchain IDE that required system design, modeling, and release planning. Leading my startup, nahneed, taught me the importance of ownership and initiative, and scaling to over fifty users in a month was both challenging and rewarding.

I am comfortable working across Java, C++, and Python, and I enjoy breaking down complex problems with a sharp analytical lens. At algoleap, I reduced manual video review time by seventy percent and cut technical debt by forty percent, all while collaborating with energetic teams to deliver results. My experience has strengthened my attention to detail and my drive to always look for better solutions.

UBS's global reach and culture of constant improvement genuinely resonate with me. I am eager to bring my curiosity, hands-on skills, and commitment to collaborative success to your team. Thank you for considering my application. I look forward to the possibility of contributing and growing with UBS.

Thanking you

Aradhye Swarup
